- French - basic level

EDUCATION

University of Zian Achor - Djelfa
Master's degree, Public International Law

EXPERIENCE

Djelfa Developers Club
Active Member | 2020 - Present

- Since joining the club, I have contributed to many activities organized by the club.
- We have organized numerous programming competitions as well as training and educational courses.
- Through these experiences, I honed my ability to collaborate effectively within a team of developers.
- I expanded my expertise in programming fundamentals.

Alshamel
Kwait (6 months, remote job)

- I remotely worked with a team of 8 developers as a frontend developer in erp application.
- This application has separate programs like pos and real state, archiving etc..
- Each program has screens and modules, each client or partner may have one or more programs for every company he owns.
- The company rents these programs to the client during a specific period, and that period is determined by the administration.

FREELANCE & PERSONAL PROJECTS

- **Abak - Consultancy Agency (Kingdom Of Saudi Arabia)**
- This application has authentication system (register, login), I used Redux & context API for handling authentication.
- Admin can send reports and notes to the clients who made orders.
- Order management system that includes making order, receiving the order by the admin and updating their status.
- Admin can add projects to the portfolio as well as images to the gallery.
Technologies used: React - Redux - Tailwind CSS - MUI

- **E-shop - Full-stack**
- Full CRUD operations for e-commerce functionalities.
- Server-side pagination, filtration and sorting.
- Users can add products to the cart and make an order.
- Responsive design and browser compatibility.
- I added file uploading system, so that the admin can upload and add images to the products and categories.
- I developed A full-stack JWT based authentication and authorization systems.
Technologies used: Next.js - React - Redux - MongoDB - Tailwind

- **E-commerce- Backend**
- I developed all CRUD required for any e-commerce (create, update, delete, get one, get all).
- I developed server-side pagination, filtration, and sorting.
- Authentication and authorization system based on JWT.
- File upload system, so that the admin can upload images to the products and categories.
- A role based access control (RBAC): [Super admin, user].
Technologies used: Node.js - Express.js - MongoDB - Mongoose
